

PROGRAMME REPORT

Water Quality Awareness Seminar & Water Testing Camp

1. Introduction

In connection with the World Environment Day celebrations, the KCYM Unit of our parish successfully organized a comprehensive water quality awareness programme titled “**Oru Thulli Kruthal**”. The programme was conducted on **7th June 2026 (Sunday)** from **4:00 PM to 5:00 PM** at **St. Thomas Church, Thiroor Priest Home**.

Water is one of the most essential natural resources that sustains life on earth. However, rapid urbanization, pollution, improper waste disposal, and overuse of natural resources have significantly affected the quality and availability of safe drinking water. In this context, the programme was designed to create awareness among parish members regarding the importance of water quality, safe drinking water practices, waterborne diseases, and sustainable water conservation methods.

The primary objective of the initiative was not only to provide theoretical awareness but also to introduce participants to basic water quality testing methods and laboratory-level analysis procedures. Through this programme, KCYM aimed to encourage environmental responsibility and promote scientific awareness among the community regarding water safety and public health.

2. Objectives of the Programme

The main objectives of the programme were:

- To create awareness on the importance of safe drinking water.
- To educate participants about different water quality parameters and their significance.
- To understand the health impacts of contaminated water and waterborne diseases.
- To promote water conservation and environmental protection practices.

3. Resource Person

As an introduction to the seminar Ms. Anna Joseph, Assistant professor, Jyothi Engineering college, Cheruthuruthy delivered an overall idea. The seminar was led by **Mr. Cyriac M. G.**, Associate Professor, Civil Engineering Department, Jyothi Engineering College,

Cheruthuruthy; Former Director, Water Resources Department, Kerala; and Former Executive Engineer, Kerala Water Authority.

Mr. Cyriac M.G

Ms. Anna Joseph

He delivered a highly informative and well-structured session on various aspects of water quality analysis. The session covered essential water quality parameters such as **pH, turbidity, hardness, fluoride, nitrates and other chemical contamination indicators**, explaining their scientific relevance and impact on human health.

He also elaborated on how different environmental and anthropogenic factors influence water quality. Special emphasis was given to the importance of regular monitoring of drinking water sources such as wells, borewells, and surface water bodies.

The resource person further highlighted the relationship between poor water quality and diseases such as cholera, typhoid, diarrhea, and other waterborne infections. The session was made highly interactive, and participants actively engaged by raising questions related to water safety, pH balance in drinking water, and household-level water purification methods. All queries were addressed clearly and scientifically by the resource person, making the session highly impactful and informative.

4. Participation

A total of **56 participants** attended the programme, including KCYM members and parishioners from the locality. The active participation of the members contributed significantly

to the success of the programme. The participants showed great interest throughout the seminar and actively interacted during the question-and-answer session.

5. Activities Conducted

The programme consisted of an awareness seminar followed by practical field-level water testing activities. The seminar provided a strong theoretical foundation on water quality and its importance in daily life. The resource person explained in detail how water quality is assessed scientifically using different parameters and how even minor changes in these parameters can affect human health and environmental balance.

He also stressed the importance of protecting natural water sources and adopting sustainable practices such as reducing pollution, avoiding plastic waste disposal into water bodies, and ensuring periodic testing of drinking water sources. The session helped participants develop a better scientific understanding of water safety and encouraged them to take responsibility for protecting local water resources.

Following the seminar, a field-level practical activity was conducted. One water sample collected from the locality was tested by KCYM members themselves using a basic water testing kit. This activity was conducted under proper guidance and helped members understand the fundamental procedures involved in water quality testing, including sample handling, testing steps, and observation of results. This hands-on involvement enhanced the practical awareness of KCYM members in environmental monitoring activities.

Water samples

In addition to the field-level testing, the remaining water samples were submitted to **Wasser Solution**, a professional water testing company. The company conducted detailed laboratory-level analysis for **46 water samples** free of cost. The laboratory results will also help in further environmental awareness and possible future interventions in water safety improvement.

6. Felicitation

The programme included a formal felicitation session to honor the resource person and other contributors. The Assistant Vicar of the church, **Fr. Jithin Nellangara**, expressed his

appreciation for the valuable contribution of the resource person **Mr. Cyriac M. G.** and **Ms. Anna Joseph.**

As a token of gratitude, they were presented with a memento and a gift hamper. The gesture reflected the parish's appreciation for their support and dedication towards environmental awareness and educational development of the community.

7. Outcome and Impact of the Programme

The programme had a significant impact on the participants as it successfully combined both theoretical and practical learning. Participants gained a deeper understanding of water quality issues and the importance of maintaining safe drinking water standards.

The interactive seminar helped clarify many scientific concepts in a simple and understandable manner, making it accessible even to non-technical participants. The field-level testing activity created curiosity and interest among KCYM members regarding environmental monitoring techniques.

The collaboration with a professional testing agency also added credibility and scientific value to the programme. Overall, the initiative strengthened environmental awareness within the parish community and encouraged responsible behavior towards water conservation.

8. Conclusion

The programme concluded with a formal vote of thanks by the KCYM programme coordinator. The event was highly successful in achieving its objectives of awareness creation, scientific understanding, and community participation.

The combination of expert-led seminar sessions and practical exposure to water testing made the programme both educational and meaningful. It also strengthened the role of KCYM in promoting environmental sustainability and community development activities.

The programme effectively highlighted the importance of water as a life-sustaining resource and reinforced the need for its protection and conservation for future generations
